

# Which Telcom. company made higher average operating profit over the years?

Operating profit of Companies in Telecom. sector over a period of time

Distribution of the operating profit of telecom. companies describe that Verizon company made highest operating profit in 2015.

The mean of Verizon company was about \$24.45 Billion, which is higher as compared to the mean of AT&T about \$19.21 Billion. That means Verizon has not only increased its total revenue but also reduced its operating and general cost in the consequent years.

The median of Verizon company was about \$25.78 Billion, which was much higher as compared to median of AT&T about \$18.33 Billion and other Telecommunication service industries. The mean is less than median, that represents the data skewed to the left, but the 50% operating profit of the Verizon company lies above \$25.78 Billion.

The standard deviation of Verizon Company was about \$9.69 Billion, much excessive than the standard deviation of AT&T of about \$1.87 Billion. It is representing that the values in the data set of Verizon company were more dispersed in relation with the mean.

Verizon Company has a range of \$19.9 Billion which is 5 times higher than AT&T company, whose range in \$3.87 Billion. It gives a rough idea about the difference between the Verizon companies lowest and highest operating profits.
